Sebastian **Bernasek**

Data Scientist | Chemical Engineer

San Francisco Bay Area

630-624-9699 | sbernasek@gmail.com | sbernasek.com | sebastianbernasek | sbernasek

Summary

Data scientist with proven success in building models to understand and predict the behavior of complex systems, as evidenced by several academic publications and granted patents. Brings a unique blend of scientific literacy, mathematical fluency, engineering pragmatism, and technical creativity, all backed by strong python scripting skills and a healthy dose of common sense. Recently concluded 5 years of academic research preceded by 3 years working at a midstage startup, and is now seeking new opportunities to continue learning while making a difference.

Expertise includes:

- **Developing quantitative models** to analyze and simulate complex processes.
- **Empowering decisions with insight** backed by rigorous analysis.
- **Building rich data sets** by turning qualitative observations into quantitative measurements.
- **Hacking together data-driven solutions** to a wide variety of everyday problems.
- **Identifying and prototyping state of the art methods** derived from the research literature.
- **Bridging the gap between research, engineering, and business** by emphasizing the broader implications of technical nuances.

Skills

Data Engineering	Analysis	Computer Vision	Modeling	Coding
Relational databases	Hypothesis testing	Feature extraction	Stochastic processes	Python & Cython
Web scraping	Bayesian inference	Image segmentation	Dynamical systems	Package development
NLP, Structured text, RegEx	Unsupervised learning	Feature classification	Nonlinear regression	REST APIs
Feature selection	Networks & Time series	Spatial analysis	Classification	Git, LaTeX, HTML/CSS
Dimensionality reduction	Visualization	Quantitative microscopy	Agent-based models	Unix shell, OSX/Ubuntu

Education

Ph.D. in Chemical and Biological Engineering *Northwestern University* 2014 - 2019

- Dissertation combined data science and chemical engineering to explore how cells make reliable decisions.

B.S. in Chemical Engineering • High Honors *University of California, Santa Barbara* 2008 - 2012

- Exchange student at Imperial College London throughout 2010/2011.

Experience

Personal Development & Consulting Present

Took a year off to explore the world, assisting some friends along the way:

- Built a database of 5k+ targeted B2B sales leads using a combination of web-scraping, commercial APIs, and machine learning.
- Provided data-driven insight that enabled a recruiting firm to boost their monthly revenue by focusing on more probable hires.
- Automated several text content extraction and parsing routines to save hundreds of hours of tedious labor.

Researcher at Northwestern University *Evanston, IL* 2014 - 2019

- Published in high profile journals including Cell and PLOS Computational Biology.
- Designed, built, and deployed several simulation and analysis frameworks for the broader research community.
- Discovered a surprising link between expression dynamics and metabolism by developing a model that accurately predicts developmental mistakes.
- Discovered a novel cell decision mechanism by using computer vision and statistical analysis to derive insight from microscopy data.
- Increased data volume and quality by developing a computer vision pipeline for automated analysis of microscope images.

Process Engineer at LanzaTech *Chicago, IL* 2012 - 2014

- Developed innovative renewable energy design concepts, earning two granted patents and further pending applications.
- Designed and built the company's core process modeling framework, which was rapidly adopted by all engineers.
- Collaborated with external technology providers to identify complementary value streams, leading to formal corporate partnerships.
- Modeled refinery-scale processes to predict and optimize economic and life-cycle performance.
- Advised executives and investors with technical analysis that directly inspired major strategic decisions.

Research Assistant at UC Santa Barbara *Santa Barbara, CA* 2011 - 2012

- Conducted first ever dynamic measurement of interaction forces between vesicles. Published in *Soft Matter*

Projects, software, publications, patents, mentorship history, and teaching history are listed on my website. References available upon request.
